### HOW TO RESTORE YOUR ORIGINAL BACKUP TUNE FORD VERSION

Congratulations on the purchase of your Predator handheld tuner - the leading performance tuner in today's automotive aftermarket! These instructions provide detailed information on how to return the copy of your original backup file from your Predator to your vehicle's ECU.

First connect the Predator to the vehicle OBDII Port located in the area under the steering wheel.

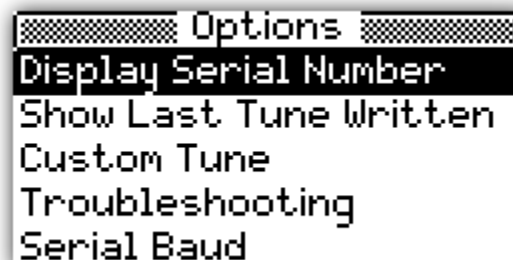

**Note:** If the Predator does not power up, check the cigarette lighter fuse. This fuse usually powers the OBDII port.

The following screen should be displayed:

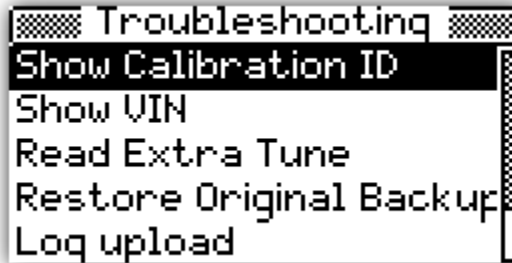

**Note:** Screen shot & version will vary between different Predator applications

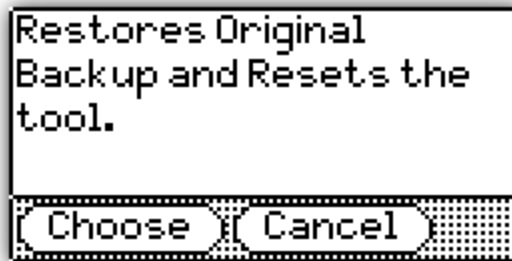

Using the arrows on the keypad, highlight "Options" and press the center circle (enter). The following screen will be displayed:

Using the arrows on the keypad, highlight "Troubleshooting" and press the center circle (enter). The following screen will be displayed:

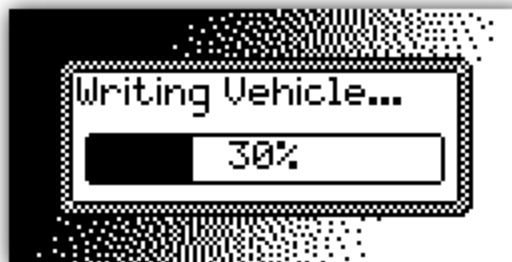

Using the arrows on the keypad, highlight "Restore Original Backup" and press the center circle (enter). The following screen will be displayed:

**Note:** Screen shot & version will vary between different Predator applications

Using the arrows on the keypad, highlight "Choose" or "Yes" (depending on application) and press the center circle (enter). The following screen will be displayed:

When the status bar reaches 100%, the Original backup has been fully restored. The tool is now unlocked for use on another vehicle.
